

EKOFOR - Injection of plastic agglomerat

Plastic agglomerat

Conveying pipelines

Distribution vessel

Injection of coarse grained remnants such plastic agglomerate, dried or granulated settling sludge into blast furnace as an substitute fuel for petroleum or natural gas

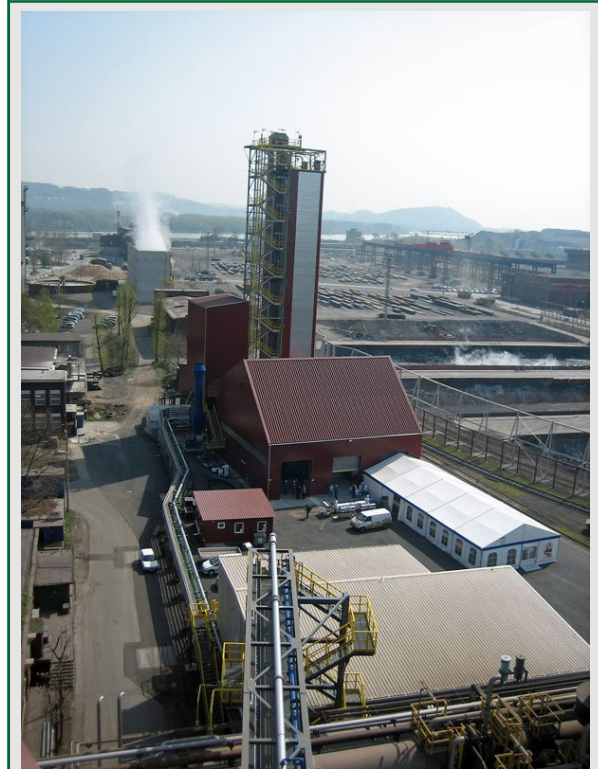

Injection plant

The EKOFOR - technology
is characterized by:

- ▶ Multiple dosing of the material for equal distribution over all delivery lines
- ▶ High availability of the EKOFOR equipment

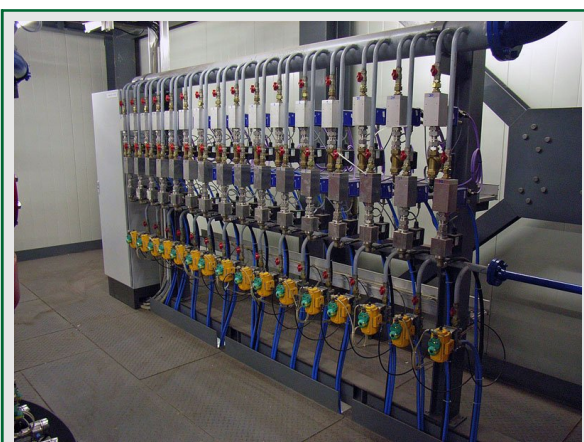

*Injection plant with EKOFOR-plant

Intermediate conveying plant

Performance:

- Feasibility studies
- Basic- and detail engineering
- Test of the capacity of the materials in our laboratory
- Delivery of the complete EKOFOR installation
- Commissioning
- Training of the operation and maintenance personnel
- After sales service

Valve stand
